Afia Analytics - Rapid Deployment BI Tool

Real-time data and insights into your most critical organizational health metrics for strategic planning

Rapid Deployment Afia Analytics Package

Speed to Insight

The Rapid Deployment BI Tool is built on our analytics platform, with the purpose of focusing real-time data on some of your most critical organizational health metrics. Implementing this tool will take as little as 2 weeks, and will create faster speed to insights as compared to other BI tools, spreadsheets, or Crystal reports, ensuring you have the right information at the right time to make strategic business decisions.

Metrics and Dashboards

Leveraging insights from your data, our experts can help identify opportunities for improvement in your revenue cycle, clinical, and operational performance. Dashboards in this package include:

Rapid BI Dashboards:

Productivity - Utilize your EHR data to monitor productivity trends across your divisions, programs, teams, and even individual staff

Revenue - Track your revenue by division, program, and team to understand how the new normal (i.e. telehealth) is affecting your bottom line

Service Volume - Understand your service counts/ hours by date, staff, program, diagnosis, etc. to identify detailed trends in your business model

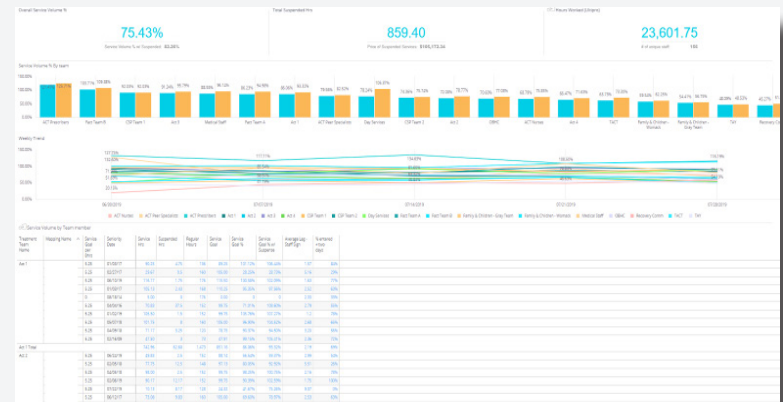

Payments - Optimize cashflow on a daily basis by understanding payments, adjustments, and open balances by key dimensions

Afia Standard Dashboards:

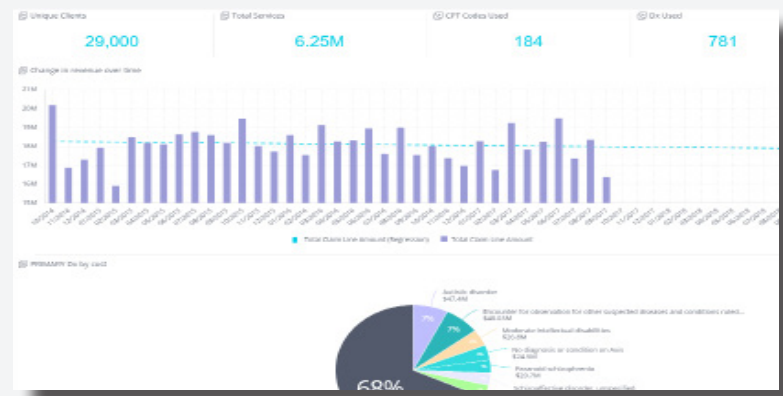

- Client Count/Client Demographics
- Medications
- Services
- Appointments
- Episodes
- Payers
